

Power BI Dashboard Documentation

Project Title

**Gen Z Mental Wellness and Digital
Lifestyle Patterns**

Domain

Human - Technology Interaction

Project Overview :

This project analyzes the impact of digital lifestyle habits on the mental wellness of Gen Z individuals. The dataset was cleaned and analyzed using Google Colab (Python), and the processed data was imported into Power BI to build an interactive dashboard for visualizing trends, patterns, and key insights.

Workflow :

Step 1 : Data Collection

- Imported the Gen Z Mental Wellness and Digital Lifestyle Patterns dataset into Google Colab.

Step 2 : Data Preprocessing in Google Colab

- Removed duplicate records.
- Handled missing values.
- Corrected data types.
- Standardized categorical values.
- Performed Exploratory Data Analysis (EDA).
- Generated insights and saved the cleaned dataset.

Step 3 : Data Import to Power BI

- Imported the cleaned CSV file from Google Colab into Power BI Desktop.
- Verified data types and relationships.

Step 4 : Dashboard Development

Created an interactive dashboard using:

- KPI Cards
- Bar Charts
- Line Charts
- Pie/Donut Charts
- Tables
- Slicers
- Filters

Step 5 : Dashboard Analysis

The dashboard enables users to analyze:

- Screen Time
- Sleep Quality
- Stress Level
- Exercise Frequency
- Content Type Preference
- Student/Working Status
- Gender-wise Analysis
- Country-wise Analysis

Dashboard Features :

- Interactive visualizations
- Dynamic slicers and filters
- KPI summary cards
- Comparative analysis
- User-friendly navigation

Key Findings :

- Higher screen time is associated with poorer sleep quality.
- Regular exercise is linked to better mental wellness.
- Digital habits significantly influence stress and overall well-being.
- Technology usage patterns differ across demographic groups.
- Interactive filtering helps identify trends and behavior patterns.

Business Outcome :

The dashboard provides data-driven insights that support healthier digital habits and informed decision-making for improving Gen Z mental wellness.

Conclusion :

The project successfully transformed raw data into an interactive Power BI dashboard by using Google Colab for data preprocessing and Power BI for visualization. The dashboard presents meaningful insights into digital lifestyle patterns and their impact on mental well-being, enabling users to explore data effectively and support data-driven decisions.
